5. Provide a brief explanation of the need for the project:	There is a need to evaluate the ability of a wireless device to coexist with other transceivers without unacceptable interaction. This standard provides an evaluation process and supporting test methods to quantify the ability of a wireless device to coexist with other wireless services in its intended radio frequency (RF) environments.	
6. Identify the stakeholders (e.g., telecom, consumer, medical, environmental, etc.) likely to be directly impacted by the standard:	EMC test laboratories, wireless designers, spectrum managers, regulators	
7. This PINS revises a previous PINS submittal:	Note: A revised PINS is only required if the previously identified stakeholders have changed substantively (see item 6 on this form.).	

8. Description of Contents of Standard: (Provide a one paragraph description, not to exceed 500 characters.)	This standard provides an evaluation procedure and supporting test methods for wireless coexistence and evaluation of key performance indicators (KPI). The standard will provide evaluation procedures, test methods and other guidance necessary for performing the evaluation.
