

Update on Status of ANSI C63.2

Werner Schaefer

May 11, 2016

Update on Status of ANSI C63.2

- **The ballot closed on Tuesday, 4/21/2015.**
- **19 people were in the ballot pool.**
- **There were 3 negative votes, 4 no responses, 0 abstentions, 6 approvals and 6 approvals with comments.**
- **The ballot passed as there was 63% Approval (Majority Test - entire ballot body) and 80% Approval (Two-thirds Test: returned votes, excluding abstentions).**

Update on Status of ANSI C63.2

- **The reason for the three negative votes were:**
 - ☐ **Limitation of the lower frequency end from 10 Hz to 9 kHz (due to reference to C63.2 in MIL-STD 461x)**
 - ☐ **Resolution: In response to the limitation of the frequency range to 9 kHz an inquiry was made to the Tri-Services committee with an extended deadline for response and no input was received. Based on this situation the two negative votes were withdrawn in writing. The frequency range of the standard covers 9 kHz to 40 GHz as originally proposed.**

Update on Status of ANSI C63.2

- **The reason for the three negative votes were:**
 - ☐ **Existence of Table 2 in new revision**
(concern is that test instrument acceptable under CISPR 16-1-1 to be unacceptable under C63.2)
 - ☐ **Resolution: Not addressed yet. Need to prepare specific wording to address the concern and get approval from balloter.**

However, clause 1.2 clearly states that the standard does harmonize the requirements in CISPR 16-1-1. However, it was agreed that an additional explicit statement will be added to clause 3 to indicate harmonization.

Update on Status of ANSI C63.2

❑ SC1 feedback: Addition of Definitions and Acronyms

❑ Resolution: List of acronyms was compiled:

➤ Acronyms: VSWR, CISPR, CW, EMI, IF, LISN

➤ Definitions: It is proposed to defer to C63.14

Update on Status of ANSI C63.2

- ☐ **SC1 feedback: Addition of standards like CISPR 16-2-1/2/3 to be added to the bibliography of the standard, not the normative reference section.**

- ☐ **Resolution: Done**

Update on Status of ANSI C63.2

Timeline for finalization:

- **Text to be completed by June 15, 2016**
- **Submission to IEEE (Sue Vogel) by June 30, 2016**
